

MICHIGAN STATE OPIOID RESPONSE 3 GPRA SUMMARY

October 2022 – June 2023

Changes Over Time: Intake, Discharge, & 6-Month Follow-Up

All types of substance use decreased post Intake.

Alcohol had the largest recorded decrease in substance use by 14.5% post Intake.

The most common substances recorded at Intake, 6MFU and Discharge were legal* substances including alcohol and marijuana.

More than 90% of the clients were not using illegal substances at Discharge or 6MFU.

Living condition satisfaction, health status and quality of life all improved post intake at Discharge and 6MFU.

Substance Use was reported on for 30 days prior to the GPRA interview.

*Marijuana is reported as a legal substance despite federal laws because Michigan legalized medical marijuana in 2008 (Michigan Compassionate Care Act) and recreational marijuana in 2018 (Michigan Regulation and Taxation of Marijuana Act). GPRA data are collected as a requirement for the Michigan State Opioid Response 2 grant through the Substance Use and Mental Health Services Administration.
